(54) Abstract Title

# Golf club head and method of securing a weight adjustment member to a golf club head

(57) A method of securing a weight adjustment member within a golf club head cavity comprises irradiating an ultraviolet curable adhesive with ultraviolet radiation and affixing the weight adjustment member to the club head. In one embodiment the ultraviolet curable adhesive is a film member applied to multiple surfaces of a weight adjustment member. The weight adjustment member is then inserted into the cavity such that the film member contacts a cavity surface in the golf club head. The film member is then allowed a predetermined amount of time in which to cure, thereby securing the weight adjustment member to the golf club head.
